DETAILED ACTION

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the features "wherein the free ends ... insertion of the knife blade" in lines 12-15 of claim1 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it

Art Unit: 2833

pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim 1, lines 12-15, the features "at a beginning of an introduction of a knife blade into the contact segment" and "the contact lamellae configured to deform only after further insertion of the knife blade" are not clearly disclosed in the specification therefore they are confused and unclear.

Claims 1-4 also are objected because in claim 1, line 10, "their free ends" lacks an antecedent basis; lines 12-15, the features "wherein the free ends ... insertion of the knife blade" are unclear since such features are not clearly shown in the drawings.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Risser et al.

Insofar as the claims can be understood, Risser, figs. 1-3 show an inner contact part 14, a spring element 28, an attachment part 20, a center segment 14 and a contact segment 22 having a contact part having at least three contact lamellae 24 pointing away from the center segment 14, each contact lamellae having a contact point (not labeled) and the free ends of the contacts being freely movable.

As to claim 2, the contact lamellae are formed in the shape of fingers and are only connected to each other at an end pointing to the center segment.

Art Unit: 2833

As to claim 3, support elements 30 situated at a section of the spring element 28, which read as the recited the external retention spring.

As to claim 4, the external retention spring substantially completely surrounds the contact part.

5. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.
